

NATUROFLOOR

How does
«morning thaw»
feel under the soles
of your feet ...

Nature's vibrant play of colour is impossible to attain. However, natural materials can be used to recreate these colour nuances in interior design very effectively. The 210 carefully selected colours in our range offer a sensual spectrum that fulfil diverse preferences and requirements.

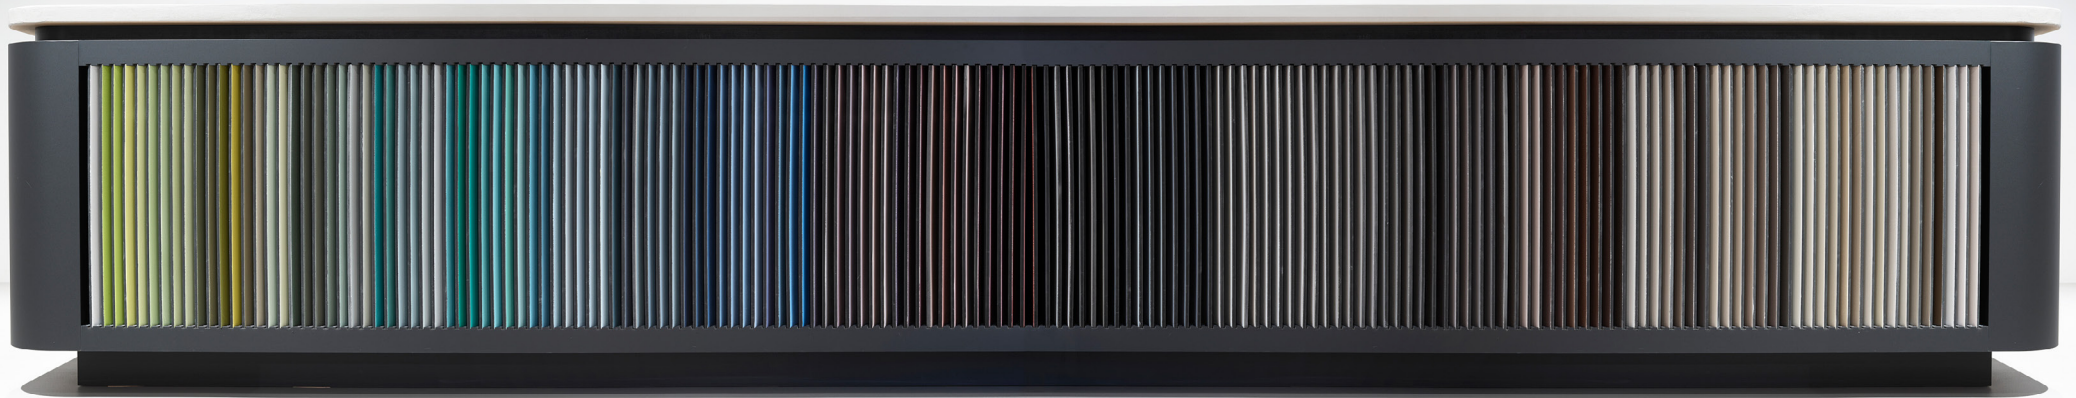

Colour choice, product feel and individual surface structure are all inextricably linked. The mineral covering from Naturofloor reveals effective colour gradients via different light effects, creating lively structural accents and exciting contrasts. Although the nuances are sometimes minimal, we set store by precisely those fine details that are the key to every perfectly customised living environment.

... and what happens
to «night blue» in
the evening light?

White is more than just White

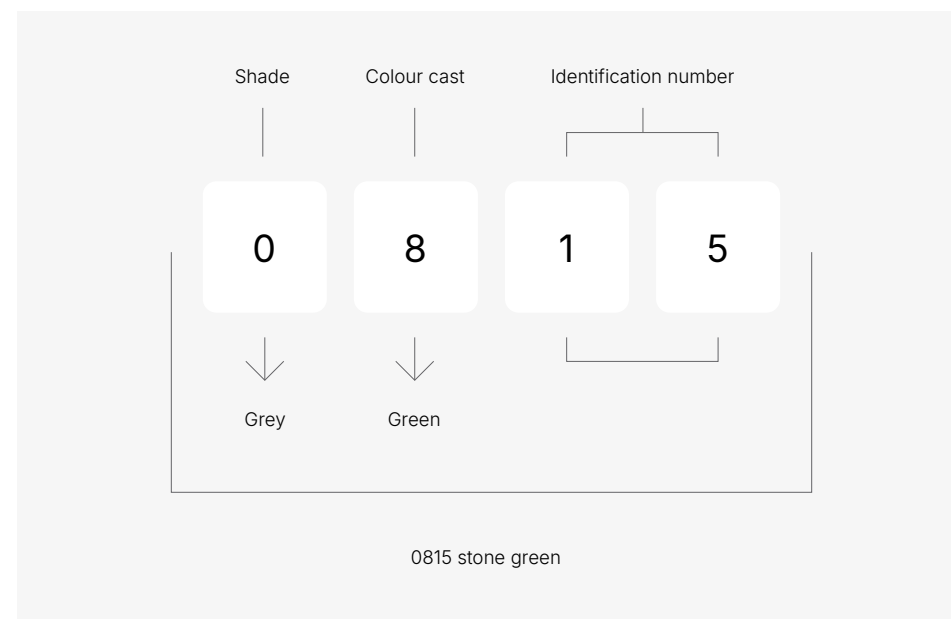

Depending on how it is prepared, the shade of antique white can vary in brightness. The actual color can only be assessed with the help of real samples.

The Naturofloor Colour System

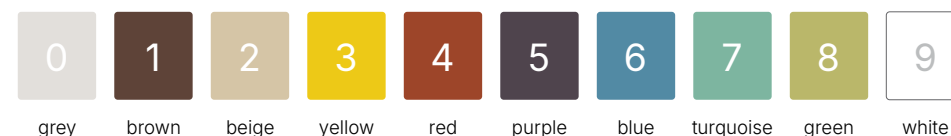

The colour spectrum follows an intuitive logic – shades belonging to each colour family are grouped together and can be clearly assigned. The numbers show at a glance whether the colour is neutral or has a colour cast and, if so, which one.

It's that simple.

The first digit stands for the shade/colour family. The second digit stands for the colour cast, while the final two digits signify the individual designation of the colour itself, arranged according to brightness.

The Colours

The Naturofloor colour palette was created using a printing process based on prefabricated Naturofloor original samples and is intended for visual colour selection as opposed to the evaluation of large-scale applications.

The colours shown may differ from those of the actual product. Sampling by the certified specialist is recommended.
