

NATUROFLOOR

EST 1990

For surfaces that last and last.

Thank you for choosing Naturofloor®, the premium hand-crafted designer covering for surfaces that are truly appealing. The best way for Naturofloor® to retain its original beauty is through proper and thorough care, just like all decorative materials.

#durablebeauty

Easy to care for

A little TLC goes a long way. We've put our heads together to come up with a list of simple ways to take care of your coated surfaces.

How to look after your surface coverings:

- The flooring can be cleaned when dry, with a vacuum cleaner or a floor mop.
- It suffices to clean the floors and walls with clean water and a high-quality microfibre cloth.
- To reduce lime scale, rinse the coated surfaces with cold water after a shower and dry them with the appropriate fibre.
- Never use very alkaline, caustic, solvent- or alcohol-based products. Dilute strong cleaning agents and de-scalers before use.
- The cleaning agents, scented and sanitary cleaners that have been developed for Naturofloor are biodegradable and are available from certified skilled tradesmen.

Things to keep in mind

Although Naturofloor® allows no liquids to penetrate, any spilled liquids should be wiped up immediately.

If water or liquids in general (shower gel, aromatic oils, plant water) do not evaporate and act on the seal over an extended period of time (constantly wet surface), the seal can soften and become spotty.

Therefore place feeding bowls and flower pots in an elevated position above the floor so air can circulate. Hair dyes, coffee, curry, saffron, oil, etc. can attack and discolour the seal if left to act on it over an extended period of time.

Preventive measures

Putting felt pads on chairs, tables, bar stools, sofas, chairs, vases and other decorative objects protects the floor.

If the worst comes to the worst

As a rule, most damage, including damage caused by heavy impacts, heat or chemicals, can be eliminated on site. In the process, the coating regains its original smooth and hygienic surface characteristics. Turn to your local Naturofloor® specialist for professional restoration work.
